A 1\%2 of x 1" notch needs to be created in the floor. This allows the flush sill to be flushed to the level of the finished surface. Net size of the flush sill is 1\%2 of wide by 1\%2 of tall. This drawing shows an 1\%2 of+ gap around the sill to allow it to be adjusted accordingly. Drawing does not take into account pans, membranes & sealants provided by others. The flush sill are not able to withstand air & water intrusion like the weather resistant sill. This option has no weep or drainage incorporated into the track, therefore evaporation and protection is important when using this sill. It is important that you include a mop zone adjacent to these doors when choosing this option. Sweep (included) is held applied.

Project: 3750 Folding Door Wall Detail - 1 inch Nail-fin - Flush Sill_20180827
